Mohammad Gayasuddin

DevOps Engineer

+91-9525214774 — mohammadgayasuddin2003@gmail.com — linkedin.com/in/ghiyas — My Portfolio

Summary

DevOps Engineer with 1.7+ years of hands-on experience building CI/CD pipelines, managing multi-cloud infrastructure, and implementing monitoring across AWS and Google Cloud Platform. Experienced in containerization, deployment automation, and reliability improvements. Focused on improving deployment efficiency, system visibility, and infrastructure scalability in production environments across cloud platforms.

Skills

Cloud Platform: AWS(IAM, EC2, VPC, S3, ECS, RDS), GCP(Cloud RUN, VM, APP ENGINE, MySQL),
DevOps Tools: CI/CD, Docker, Kubernetes, Linux, Jenkins, Git, GitHub
CI/CD and Monitoring: Cloud Build, AWS Codepipeline, Prometheus, Grafana, Cloudwatch, ELK
Database: MySQL, Mongo Atlas
Infrastructure Migration: Lift-and-Shift Migration, Velostrata, AWS DMS, AWS SMS, VM Migration
Cost Optimization: Right-sizing, Cost Explorer analytics, Billing Management, Budget alert

Experience

DevOps Engineer **Oct 2024 – Present**
Kommunicate *Bengaluru*

- Designed and maintained CI/CD pipelines to automate application build, test, and deployment workflows.
- Optimized cloud infrastructure by migrating services from AWS to GCP, improving performance and scalability.
- Monitored infrastructure health using CloudWatch and Cloud Monitoring, maintaining 99.5% application uptime.
- Collaborated with cross-functional teams to troubleshoot production issues and improve overall platform reliability.
- Achieved 25% reduction in overall operational costs while significantly improving system availability and scalability.
- Improved compliance management by overseeing Sprinto tasks, automating security controls and audit readiness, and enhancing project tracking and team productivity by 10%.

Projects

End to End CI/CD Pipeline | *CodePipeline, Cloud Build*

- Streamlined a continuous integration and continuous deployment pipeline to deploy an application.
- Automated deployment and monitoring using AWS CodePipeline, Elastic Beanstalk, and CloudWatch, with integrated load balancing to ensure high availability and real-time application performance insights.
- Reduced manual effort by 50% through an enhanced CI/CD pipeline, leveraging AWS Elastic Beanstalk automation and monitoring features to improve system reliability and operational efficiency.

Cloud Workload Migration | *AWS, GCP*

- Migrated cloud workloads including VM, databases, storage, and serverless services from AWS to Google Cloud Platform using Velostrata, ensuring minimal downtime and service continuity.
- Applied lift-and-shift migration strategy, enabling real-time workload mobility while improving infrastructure scalability and reducing operational costs.

VM Health Monitoring Agent | *Python, Flask, Google Cloud Monitoring API*

- Built a multi-project GCP monitoring dashboard that aggregates real-time CPU and memory utilization across all environments (Prod, Dev, regional) using the Cloud Monitoring and Compute Engine APIs.
- Implemented per-instance health scoring with automated status classification (Critical/Warning/Healthy) and interactive gauge charts for visual performance tracking.
- Containerized the application with Docker and deployed via Gunicorn, with support for configurable time-range queries.

Certifications

- Azure Fundamentals
- Oracle Cloud Infrastructure Certified Architect Associate
- Oracle Cloud Infrastructure Certified DevOps Professional

Education

B.Tech CSE **Graduated: 2024**
Motihari College of engineering, East Champaran *CGPA: 7.5 / 10*
